

Tools for K12 Transformation

The Infinite Campus statewide accountability system combines numerous data management functions into an integrated solution for ease in managing federal, state, and regional consortia level data access and reporting. Infinite Campus delivers proven state department of education tools including unique student ID assignment, student data transfers, and adequate yearly progress reporting.

State Edition provides options for departments of education to collect data to meet their state's unique needs.

Flexible Data Collection

Districts have several ways to share educational information with the state including:

Embedded SIS

Small districts can manage data (e.g. demographics, enrollment, scheduling, attendance, grading, and special education) using the embedded web-based SIS. No other software is required.

Vertical Interoperability

Districts can install a local copy of the Campus SIS that includes a district-level Zone Integration Server (ZIS) which communicates directly with the state's ZIS in real time.

Vertical Reporting

Districts using legacy SIS products and compatible SIF vertical reporting agents can communicate with the embedded state ZIS.

File Exchange

Data can be transferred to and from legacy SIS products using the embedded web-based ETL tools.

Real-Time Student Tracking

All current and historical information is kept in a highly normalized transaction database that provides:

Unique Student Identification

Student IDs can be assigned individually or in batches. Student identification can be performed manually using a Web browser or automatically via Web messaging.

Enrollment Overlap

With enrollments tracked in real time, overlapping records can be detected and corrected as they occur, as opposed to at the end of the year.

Student Data Transfers

Electronic student data record transfer is offered as an incentive to encourage districts to use the student ID system. All student data elements tracked are available for transfer between districts. National student data transfers are available through the Campus National Records Exchange.

Data Warehousing

Transactional data can be extracted at any time and used to populate the system's data warehouse for:

File Extracts

Files can be extracted from the data warehouse in a variety of formats that comply with federal AYP, CCD, NCLB, EDEN and ESEA requirements as well as fulfilling state departmental needs.

Web-based Reporting

Standard and ad hoc reports can be generated using the embedded web-based reporting tools. A public portal automatically provides state, district and school level NCLB information in a friendly report card format.

Data Analysis & Visualization

Both district and state level users can access the system's integrated OLAP engine for data analysis, visualization and secure drill-through to detailed records.

Infinite Campus provides professional services including rapid implementation services, data conversion, training, ongoing support and hosting. Ready to transform your organization? We are. Learn more by contacting Infinite Campus today.
