Q&A

WITH

# Cedar Rapids Community Schools

CRAIG BARNUM | EXECUTIVE DIRECTOR OF DIGITAL LITERACY AND IT

CEDAR RAPIDS, IOWA | STUDENT COUNT: 16,598

Cedar Rapids Community School District

Every Learner: Future Ready

Q What do you like the most about Infinite Campus, the company?

Answer: "I appreciate the purpose-driven education focus that Campus team uses to guide their work and product development. Many other ed tech companies are solely focused on growth and profit and will use these metrics as guideposts for their work which is often not what is best for kids, teachers, and schools. While I certainly don't agree with every decision the Campus team makes, I do trust that their decisions are made with a focus on what is best educationally."

Q What are three benefits you've experienced using Infinite Campus?

Answer: "1. Campus allows my team to create data visualizations that provide insights for our leaders and teachers, which improve our practice.

2. Campus is robust, scalable, and reliable.

3. Campus gives us a standard platform to improve day-to-day operations (attendance, behavior, grading, etc...)."

Q How has Campus SIS improved your day-to-day?

Answer: "Campus provides a common, single source of truth for our nearly all our student data needs."

Q What are your favorite tools or features in Campus SIS?

Answer: "I find the ability to integrate third party tools like Tableau very, very helpful. For example, we have several Tableau data visualizations linked into our Campus tools outline."

Q What would you tell other schools/districts about the Infinite Campus SIS and integrated products/suites?

Answer: "Campus is a best in breed student data system. That being said, it won't mask or make fundamental issues with data quality go away. Work on data processes to ensure that data you have is as clean and accurate as possible. With that done, Campus will rarely limit what you want to do and find out about your schools. Having a tool such as this is very, very valuable."

One System

Infinite Campus SIS includes the necessary tools for administrators, teachers, students and parents in a single database – no uploading, downloading or syncing of disparate systems.
