

West Des Moines Community School District

MIKE SHERMAN | DIRECTOR OF DATA MANAGEMENT | WEST DES MOINES, IOWA | STUDENT COUNT: 9248

Q What challenges did your school(s)/district face during COVID? What did Infinite Campus SIS do to help you solve them?

Answer: "Shifting expectations regarding what we were being required to report from a health and attendance standpoint.

The Blended Learning tool really helped us identify which students were learning in which format, from an attendance and communication perspective. Reporting this was difficult but improved as the year went on."

One System

Infinite Campus SIS includes the necessary tools for administrators, teachers, students and parents in a single database – no uploading, downloading or syncing of disparate systems.

Q Which COVID resources (blended learning, teacher resources, attendance check-in, daily health log, etc.) were most helpful and how/why?

Answer: "Blended Learning was the most helpful, as it allowed us to accurately reflect and adjust learning modes and communicate those choices with a wide variety of teams. We simply would not have been able to report accurate online vs. onsite learning data for the Pandemic/EBT data collection that we learned about in March without this tool."

Q If you were talking to a district using an outdated SIS that is lacking functionality and does not get updated monthly, what would you tell them?

Answer: "Infinite Campus has been working hard to listen and make improvements in recent years, and these improvements are very much appreciated."

Q What would you tell other schools/districts about Infinite Campus' response to COVID? About Infinite Campus the company?

Answer: "Infinite Campus has made a valiant effort to support the needs of schools during COVID. As a company I have noticed that they are listening to their customers."

Q How can Infinite Campus lead us into the 22nd century?

Answer: "Their product is highly adaptable, and they continue to look for opportunities to improve their product."
